

#### Collisions

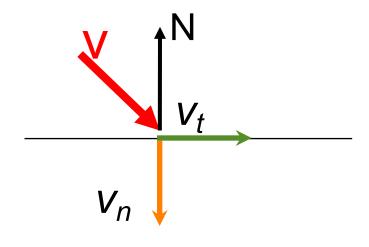

- Detection
- Response
- Overshooting problem (when we enter the solid)

# Collision Response for Particles

# Collision Response for Particles

$$V=V_n+V_t$$

normal component tangential component

#### Collision Response for Particles

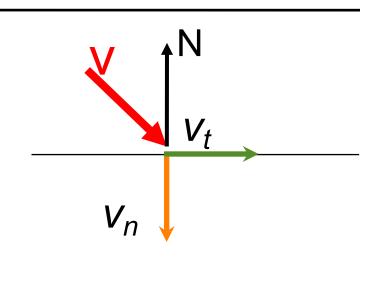

- Tangential velocity  $v_t$  often unchanged
- Normal velocity  $v_n$  reflects:

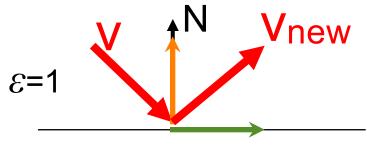

$$v = v_t + v_n$$

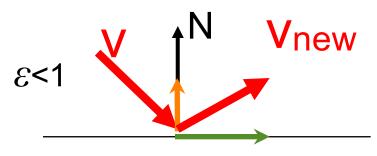

$$v \leftarrow v_t - \varepsilon v_n$$

• Coefficient of restitution  $\varepsilon$ 

• When  $\varepsilon = 1$ , mirror reflection

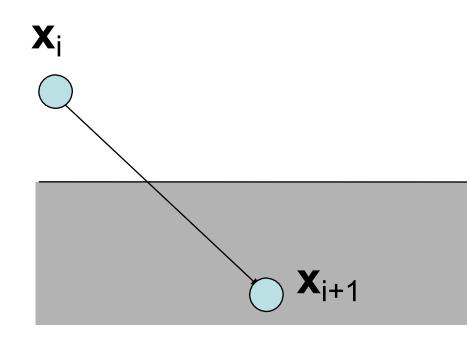

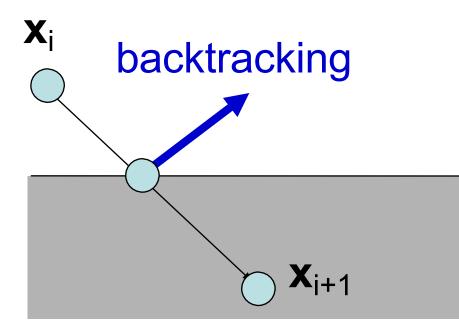

## Collisions – Overshooting

• Usually, we detect collision when it is too late: we are already inside

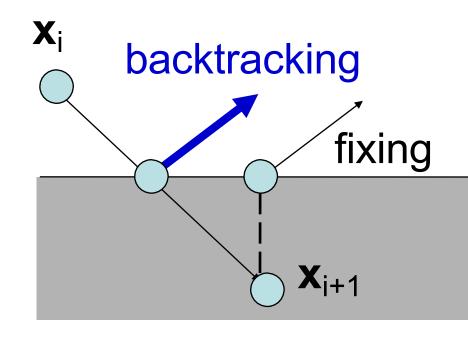

## Collisions – Overshooting

- Usually, we detect collision when it is too late: we are already inside
- Solution: Back up
  - Compute intersection point
  - Ray-object intersection!
  - Compute response there
  - Advance for remaining fractional time step

## Collisions – Overshooting

- Usually, we detect collision when it is too late: we are already inside
- Solution: Back up
  - Compute intersection point
  - Ray-object intersection!
  - Compute response there
  - Advance for remaining fractional time step
- Other solution:Quick and dirty hack
  - Just project back to object closest point

# Questions?

## Collision Detection in Big Scenes

- Imagine we have *n* objects. Can we test all pairwise intersections?
  - Quadratic cost  $O(n^2)$ !

- Simple optimization: separate static objects
  - But still O(static × dynamic+ dynamic²)

## Collision Detection in Big Scenes

• How to speed up the process?

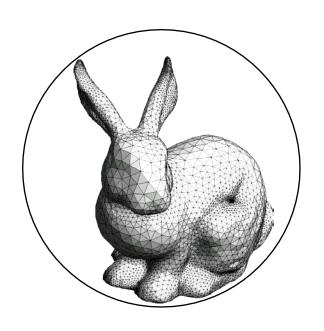

#### Hierarchical Collision Detection

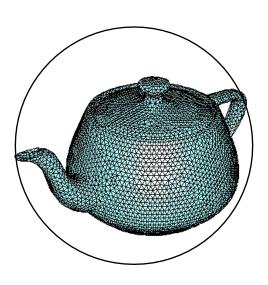

• Use simpler conservative proxies (e.g. bounding spheres)

- Recursive (hierarchical) test
  - Spend time only for parts of the scene that are close
- Many different versions, we will cover only one
- More on Ray Tracing acceleration

## **Bounding Spheres**

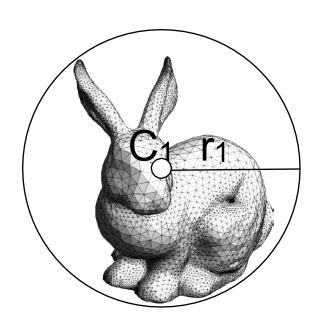

- Place spheres around objects
- If spheres do not intersect, neither do the objects!
- Sphere-sphere collision test is easy.

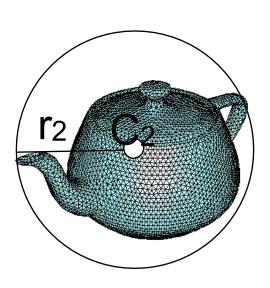

## Sphere-Sphere Collision Test

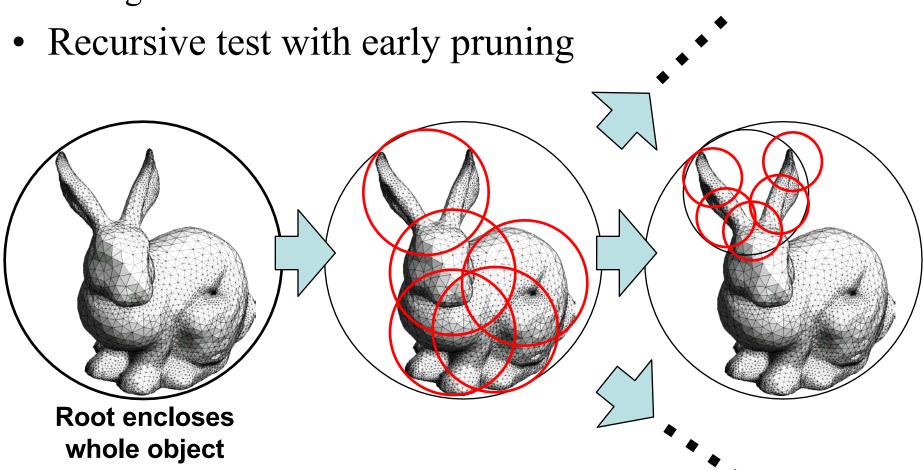

- Two spheres, centers  $C_1$  and  $C_2$ , radii  $r_1$  and  $r_2$
- Intersect only if  $||C_1C_2|| < r_1 + r_2$

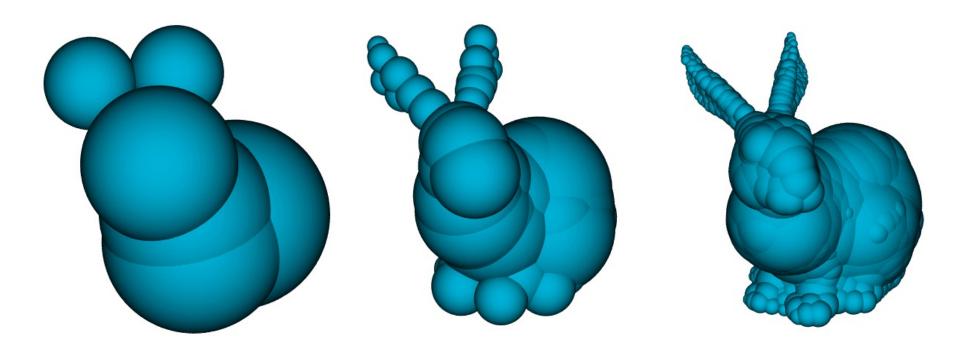

#### Hierarchical Collision Test

- Hierarchy of bounding spheres
  - Organized in a tree

# **Examples of Hierarchy**

http://isg.cs.tcd.ie/spheretree/

# Pseudocode (simplistic version)

```
boolean intersect (node1, node2)
   // no overlap? ==> no intersection!
   if (!overlap(node1->sphere, node2->sphere)
      return false
   // recurse down the larger of the two nodes
   if (node1->radius()>node2->radius())
      for each child c of node1
         if intersect(c, node2) return true
   else
      for each child c of node2
        if intersect(c, node1) return true
   // no intersection in the subtrees? ==> no intersection!
   return false
```

```
boolean intersect(node1, node2)

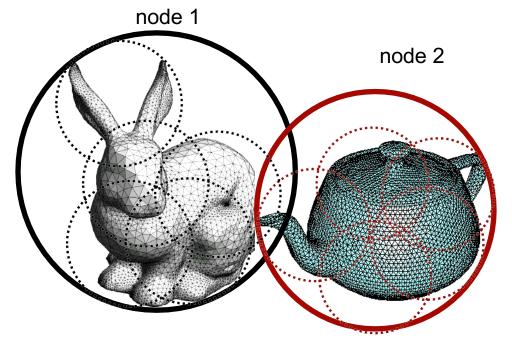

if (!overlap(node1->sphere, node2->sphere)
    return false

if (node1->radius()>node2->radius())
    for each child c of node1
```

else

for each child c f node2
 if intersect(c, node1) return true
return false

if intersect(c, node2) return true

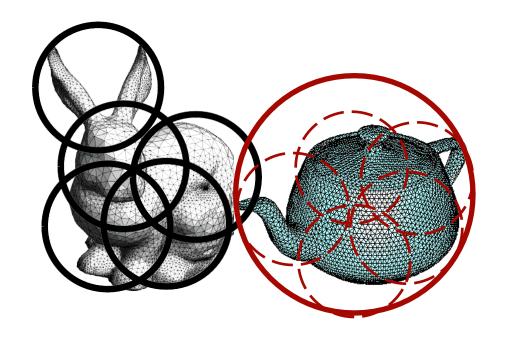

```
boolean intersect(node1, node2)
  if (!overlap(node1->sphere, node2->sphere)
     return false
  if (node1->radius()>node2->radius())
```

for each child c of node1
 if intersect(c, node2) return true

else

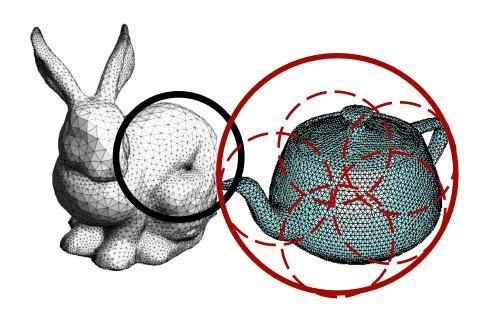

for each child c f node2
 if intersect(c, node1) return true
return false

```
if (!overlap(node1->sphere, node2->sphere)
    return false
    if (node1->radius()>node2->radius())
        for each child c of node1
        if intersect(c, node2) return true
```

else

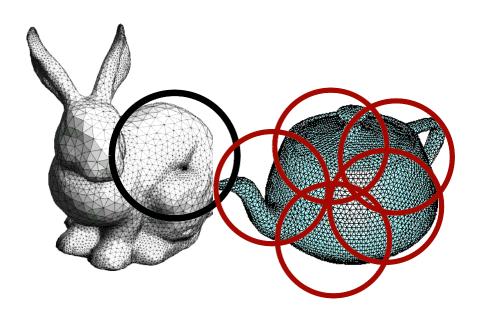

for each child c f node2
 if intersect(c, node1) return true
return false

```
boolean intersect(node1, node2)
  if (!overlap(node1->sphere, node2->sphere)
    return false
  if (node1->radius()>node2->radius())
    for each child c of node1
    if intersect(c, node2) return true
```

else
 for each child c f node2
 if intersect(c, node1) return true

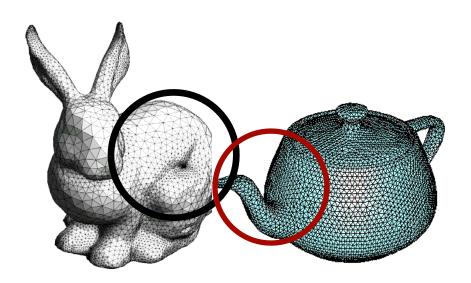

return false

#### boolean intersect(node1, node2)

```
if (!overlap(node1->sphere, node2->sphere)
    return false
if (node1->radius()>node2->radius())
```

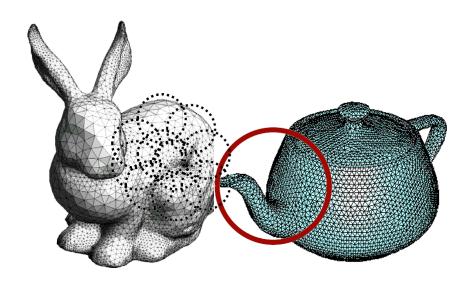

if intersect(c, node2) return true
else
 for each child c f node2
 ifintersect(c, node1) return true
return false

#### boolean intersect(node1, node2)

```
if (!overlap(node1->sphere, node2->sphere)
  return false
if (node1->radius()>node2->radius())
for each shild a of node1
```

if intersect(c, node2) return true
else
 for each child c f node2
 ifintersect(c, node1) return true
return false

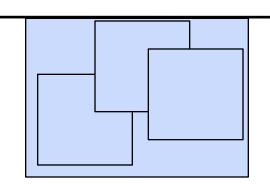

#### Pseudocode (with leaf case)

```
boolean intersect (node1, node2)
     (!overlap(node1->sphere, node2->sphere)
      return false
   // if there is nowhere to go, test everything
   if (node1->isLeaf() && node2->isLeaf())
      perform full test between all primitives within
      nodes
   // otherwise go down the tree in the non-leaf path
   if ( !node2->isLeaf() && !node1->isLeaf() )
      // pick the larger node to subdivide, then recurse
   else
      // recurse down the node that is not a leaf
   return false
```

#### Questions?

http://www.youtube.com/watch?v=2SXixK7yCGU

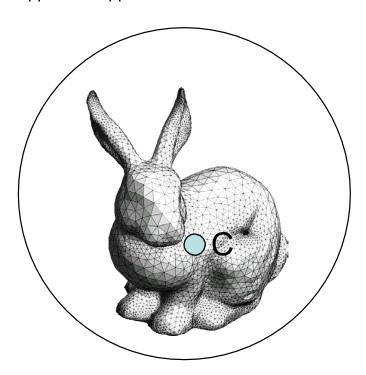

# **Hierarchy Construction**

- Top down
  - Divide and conquer
- Bottom up
  - Cluster nearby objects

- Incremental
  - Add objects one by one, binary-tree style.

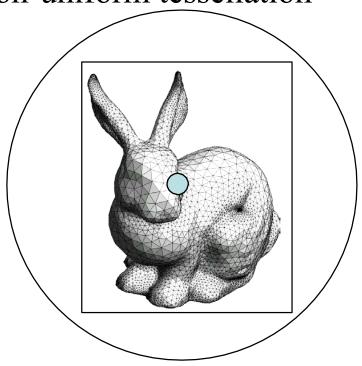

# Bounding Sphere of a Set of Points

- Trivial given point set center *C* 
  - $\text{ radius} = \max_{i} ||C-P_i||$

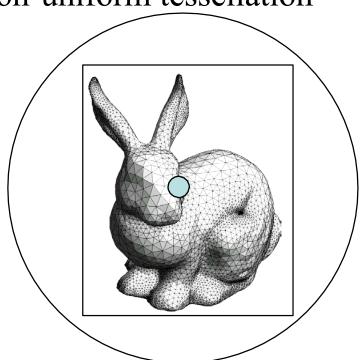

#### Bounding Sphere of a Set of Points

- Using axis-aligned bounding box
  - center=  $((x_{min}+x_{max})/2, (y_{min}+y_{max})/2, (z_{min}+z_{max})/2)$
  - Better than the average of the vertices because does not suffer from non-uniform tessellation

# Bounding Sphere of a Set of Points

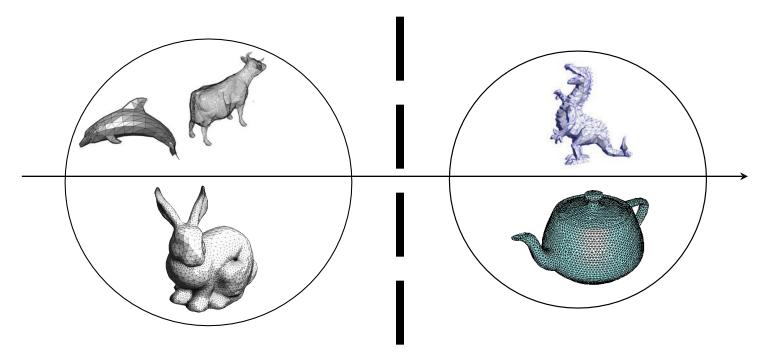

- Using axis-aligned bounding box
  - center=  $((x_{min}+x_{max})/2, (y_{min}+y_{max})/2, (z_{min}+z_{max})/2)$
  - Better than the average of the vertices because does not suffer from non-uniform tessellation

Questions?

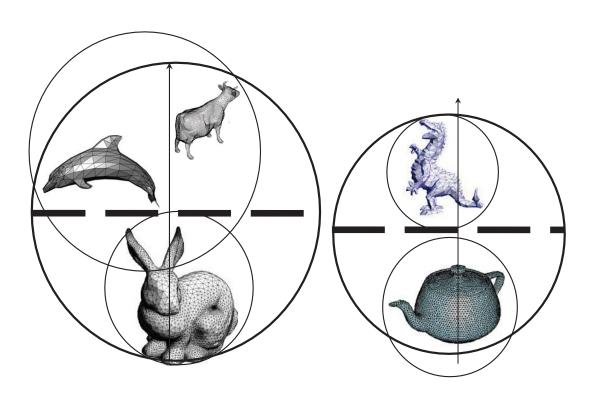

#### **Top-Down Construction**

- Take longest scene dimension
- Cut in two in the middle
  - assign each object or triangle to one side
  - build sphere around it

#### Top-Down Construction - Recurse

- Take longest scene dimension
- Cut in two in the middle
  - assign each object or triangle to one side
  - build sphere around it

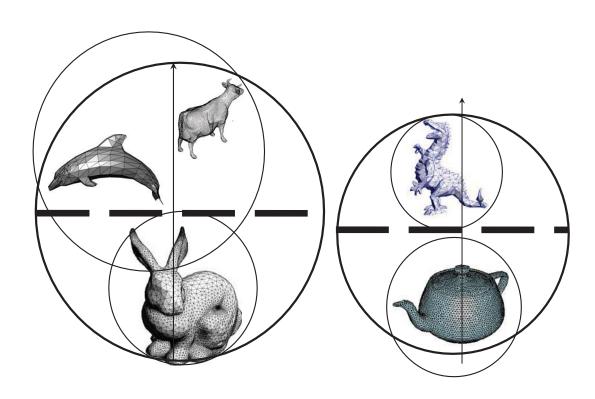

#### Top-Down Construction - Recurse

- Take longest scene dimension
- Cut in two in the middle

#### Questions?

- assign each object or triangle to one side
- build sphere around it
